

Emocial Javascript Assignment

As a small task, could you please create a feedback form that posts the form data to a server using an api call **with form validation and placeholders**. This is for us to assess your skill in Javascript. The form should have the following fields:

- First name
- Last name
- Email address
- Phone number
- Feedback

The api call to use is: **`http://private-e2353-js8.apiary-mock.com/posttoform`**

The request object is the following:

Request (application/json)

```
{
  "name": "John",
  "lastName": "Doe",
  "email": "ab@yopmail.com",
  "phone": "023803102",
  "description": "Hello world!"
}
```

It expects you to post the data using JSON. Please use Javascript and JQuery

This assignment should take you between **30 mins to 1 hour to complete**.

Please create a webpage where this functionality can be tested.

Bonus points:

- Using AngularJS

After you have completed the assignment:

- 1) Could you give us access to the repository that you have pushed the code in.

- 2) Could you please notify us by email by the time set to complete the assignment. The sooner you notify us the better, since it will speed up the application process.
- 3) Could you please give us the URL to the deployed site
